Collecting New Features

While in the field, the HEI team can collect points, lines, and areas.

We have set up Collector to give the options of what type of point, line, or area the feature will be.

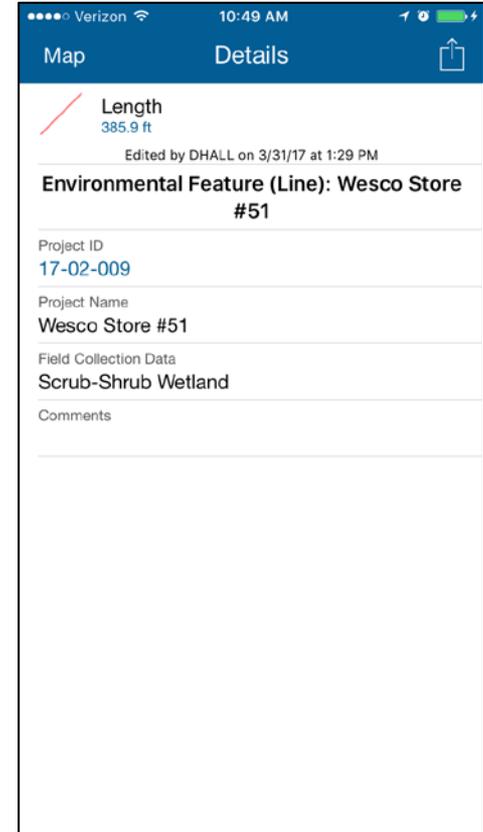

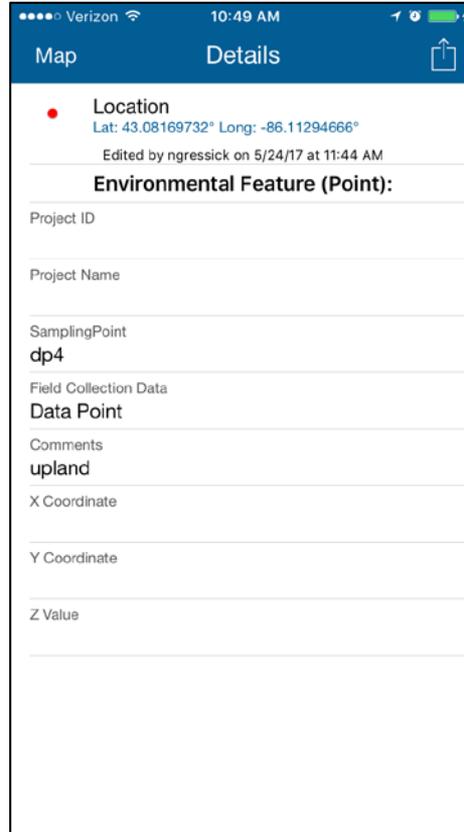

Again, making the process quick and easy in the field and the office.

Details

These are examples of a point and a line taken in the field.

Each row will be filled out by an HEI employee. These rows can be edited in the field or in the office.

Map View

Map View #1

This project had a tree line walked, and then two data-points taken in the field. This would be considered a small project that Collector was used on.

Map View #2

This project had all three types of features taken, (points, lines, and areas). It was a larger project our team walked, and we were able to see real-time of where the crew was located throughout the delineation and the data that they were collecting.

Holland Engineering provides engineering, project management, land surveying, environmental and field services throughout the Energy, Civil Infrastructure and Government markets.
